Traffic Impacts and Construction Update for Roberts Drive the week of 2/27/17 to 3/3/17

The Water Main project has officially begun. Police officers are assisting non-local access traffic to the proper detour routes and ensuring Semi trucks are not using Roberts Dr. The Police Officers are located at the East end of Roberts Drive and the other officer stationed at Roberts Drive and Lake Sawyer Road. If you are expecting a local delivery please try to contact your delivery driver so when they approach the Police Officer Stations they are aware of what it going on.

This week, crews are beginning to mobilize equipment and materials to a fenced off yard area by SR169. Expect delays as crews will then begin installation of 12" water main near the library and will be heading East towards SR169. The West bound lane of Roberts Drive will be down to one lane and controlled by traffic control flaggers in the active construction areas. Also be aware of some shoulder closures that may exist in. Please use caution driving through the one lane traffic controlled areas to keep workers safe. Work hours this week will be 7am-5pm. The road will remain only open to local access only and closed to trucks with a GVW over 20,000lbs. During the night please be cautious driving through the construction zone as there may be loose gravel in some places or steel sheets on the road way.

School busses and emergency vehicles will have the right away and our flaggers will ensure they have open access to the roadway without any delays.

Expect delays in the areas where flaggers are present. Please also be aware and use caution of heavy equipment traveling up and down Roberts Drive as crews begin to mobilize equipment and materials from The Villages to our fenced in yard at SR169. You can expect updates on a weekly basis.

Please contact the City of Black Diamond Master Development Review Team at 360-886-5700 for additional information.
